

AI-Driven Workplace Task Assessment

- Capture Video
- Process It
- Eliminate Risks

SPEED UP ASSESSMENTS

Capture & assess work tasks on the go. Videos from the app are automatically synchronized with the dashboard for AI-driven processing, allowing you to get an instant result

ENGAGE WORKERS

Show processed videos to workers within minutes, replacing long ergonomic reports with a very simple & intuitive risks explanation form, understandable to everyone

ENDLESS APPLICATION

Assess every task possible, SoterTask will provide detailed insights and accuracy of execution, whether working at a desk, lifting objects or even playing golf

Data-driven workplace task assessment. Capture video. Process it. Eliminate risks.

A cloud-based solution combines video captured through our mobile application with AI-driven data analysis to accurately measure risk movements in the workplace and help you to implement controls that keep your workforce safe.

The video & data of workplace tasks is available on the online dashboard.

HOW IT WORKS

Capture a video via the app or upload it straight to the platform

- no preparation

Algorithms process the video and measure a variety of postures & angles

- no special hardware required

Eliminate risks within tasks with the data-proven method

- record and upload the video using app

THE POWER OF DATA

The data can be used to evaluate angles or risk within any movement of the entire body or its segments, it can also be used to visualize ergonomic risk when introducing new tools or manual handling techniques.

For implementing best practices, an easily generated in-depth ergonomic report can be exported for evaluating options, record keeping and file sharing.
