

SoterTask by Soter Analytics

AI-DRIVEN ERGONOMIC RISK & TASK ASSESSMENT SOLUTION

A cloud-based solution combines video captured through our mobile application with AI-driven data analysis to accurately measure risk movements in the workplace and help you to implement controls that keep your workforce safe.

The video & data of workplace tasks is available on the online dashboard.

CAPTURE

Capture & assess work tasks on the go. Take videos through the SoterTask mobile app at any time to get the real-time interpretation of risk and further analysis in the dashboard.

Quick identification of ergonomic risks means rapid reaction. Rapid reaction - less injuries..

PROCESS

Show processed videos to workers within minutes, replacing long ergonomic reports with simple and intuitive risks explanations.

The simple interpretation of data furnishes high engagement rates when improving ergonomic techniques, more controlled physical activity and fewer injuries.

ELIMINATE

Eliminate risks by evaluating exact angles of the entire body or its segments.

The dashboard does all the report writing for you, displaying detailed and analyzed hazard information along with using integrated industry-standard ergonomic tools for assessment and risk comparisons.

COMPARE

Compare videos to visualize ergonomic risk when introducing new tools or manual handling techniques.

For implementing best practices, an easily generated in-depth ergonomic report can be exported for evaluating options, record keeping and file sharing.

Itemizes every movement and identifies the origins of a risk

Instantaneous easy to understand video processing available on the app, with clear stats and graphics even for the non specialist

High usability technology suitable for all levels: from workers through to management. It can be used both to solve one small task or for large ergonomic projects
